

A SECTIONING APPARATUS FOR A PROTECTIVE FORM-FITTING COVER OF AN OBJECT

Abstract

A sectioning apparatus (10) for a form-fitting cover (14) of an object includes multiple material coupling members (16) that are coupled to at least one portion (20) of the form-fitting cover (14). A separating assembly (18) is coupled to the material coupling members (16) and is separable into multiple separation mating members (22). The separating assembly (18) separates the form-fitting cover (14) into multiple sections (24).
